| BLOOM LEAN ENTERPRISE EXPERIMENT CANVAS  |   | The one metric that matters                             |   |  | Control metric   | Control metric          |   |  |  |
|--|---|---|---|--|------------------|-------------------------|---|--|--|
|  |   | Draw a line in the sand: the one metric you want to     |   | If there is a control metric you want to keep an eye |                  |                         |   |  |  |
| Date: Responsible person:  | 3 | impact, with how much, by when  Current value of metric |   | act, with how much, by                               |                  | on, specify here        |   |  |  |
| Goal: to learn Project name:   |   |   |   |  | Current value of | Current value of metric |   |  |  |
| Step of cycle  |   | Experiments   | 1 | 2  | 3                | 4                       | 5 |  |  |
| Phrase the problem from your customers' perspective. Include the proof point.  ☐ Is this really a problem? (validate with clients/data)  ☐ Is this one of the most important problems? (estimate impact and apply Pareto principle)  |   | Problem   |   |  |                  |                         |   |  |  |
| Define the possible solution  ☐ Is the solution easy to implement?  ☐ Is there a balanced mix of iterative improvements (±80%) and major leaps (±20%)?   |   | Solution  |   |  |                  |                         |   |  |  |
| Design the test ("I will run experiment #X with Y% of customers in period Z")  ☐ Is this this the fastest way to test my solution with minimal amount of resources (time, people, money)?  ☐ Do actual users give feedback, implicitly or explicitly?  ☐ Is the test time-boxed? |   | Test method   |   |  |                  |                         |   |  |  |

|   | Get out of the building |  |  |  |  |  |  |
|---|-------------------------|--|--|--|--|--|--|
| Describe the results of your tests. Based on the results, take a decision   | Result & decision       |  |  |  |  |  |  |
| Describe the lessons learned from the experiment  | Learning                |  |  |  |  |  |  |
| Did we change the one metric that matters significantly? Are control variables still ok? If yes: pop champagne, and build the actual solution. If not: pivot/persevere. |                         |  |  |  |  |  |  |

Success criterion

Determine what success looks like ("During the test, I expect strong signal from X% of customers"/visitors)
